## 52800 VV Super Precision Tool Maker Vise

### Features :

- ▲ VV Tool Maker Vise is made of high quality alloy tool steel (SKS3)
- ▲ Special design to prevent distortion during clamping ensuring the accuracy for work processing on workpieces.
- ▲ With quick adjust spring function, clamping jaw can move and position easily.
- ▲ Material:SKS3
- ▲ Hardness:HRC58°~60°
- ▲ Sub-zero treatment:-185°C
- ▲ Parallelism:within 0.003mm/100mm
- ▲ Squareness:within 0.004mm/100mm

### Super Precision Tool Maker Vise

■ New improved VV Tool Maker Vise before clamping operation.

■ Improved VV Tool Maker Vise, inner block face force when clamping and no twist or distortion is existing and achieve higher accuracy and stability.

### Principle of anti-distortion

Upward spring

■ When the fixed pin face the pressure from the spring, it generates upward twisting torque and push the screw match with the inner block.

### General Tool Maker Vise

■ V series Tool Maker Vise before clamping operation

■ Conventional vise has distortion or twist when clamping workpiece and thus lead to poor accuracy.

■ Conventional vise needs to position the fix pin when you loose the screw, it all depends on manual work.

# Anti-distortion

HU60/HU70/HU90 are all adopting inbuilt Anti-distortion

Comparison

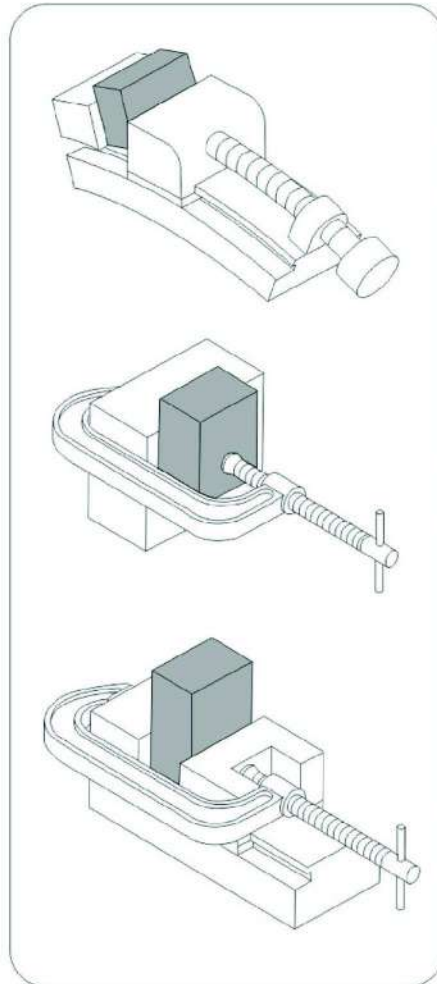

HU60

HU70

HU90

General Tool Maker Vise will distort from clamping stress and thus impede the precision processing.

Applying fixture block is essential for high precision processing, however, it is not cost effective.

Applying fixture block and the vise it achieve cost effective and high precision processing.

Making inbuilt fixture into vise and it help the precision processing due to the distortion stress will react on fixture. Thus no distortion influent the parallelism and perpendicularity.
